Amend claim 4 as follows:

4. (amended) A spring mechanism for a trailer ramp door, adapted to be completely enclosed in a slot formed in a rectangular tubular side member of a trailer rear entrance frame, comprising:

a spring having a top end and a bottom end;

means for securely attaching said top end inside said slot formed in [a] the side member of [a] the trailer rear entrance frame, and means for securely attaching said bottom end to the inner surface of a flange member extending outwardly from a side member of a ramp door frame; whereby closing a trailer ramp door results in inserting said spring into said slot and said flange member completely encloses said spring in said slot.
